LUIS CHAVEZ

Full Stack Software Developer

ABOUT ME

Hello! My name is Luis and I have a great passion for writing code. One of my favorite aspects of software development is that there is always something new to learn and the possibilities for growth are endless. All you really need is a computer and some imagination and you can build anything! I also love that half the learning comes straight from the community itself and I really enjoy working with others to achieve a common goal. Since I've always had an interest in web development, I had done some studying on my own reading as many books and taking as many online courses as I could. However, I recently graduated from Nashville Software School and a whole new world of opportunities has become available to me through this program. I am excited to show everyone what I can offer.

CONTACT INFORMATION

Phone Number: 931-808-1391

SKILLS

HTML
CSS
Javascript
React & JSX
C#
ASP.NET MVC
.NET Core
SQL Server
Github
Postman
jQuery
Git
JSON
Bootstrap
Figma
Microsoft Visual Studio

OTHER SKILLS

Bilingual- English & Spanish
-Emergency Medical Responder training
-CPR training
-Customer Service/ Q&A Experience
-Retail & Sales Experience

EDUCATION HISTORY

Nashville Software School
Full Stack Software Development
Graduated

Nashville Software School
UI & UX for Digital Product Design & Mastering SQL for Developers
Completed

Nutshell (Group Project)

It was a 5 day sprint between 3 other classmates and myself. The goal of the app was to code a mock app of Facebook where users would be able to add new friends to their friend lists, which would allow them to then message those users. Users of the web app would also be able to have full crud on components like events, blog type posts, and Todo List that only they could see individually after logging in. I was in charge of CRUD functionality on the Events, Todo Items, and Post components.

Front-End Capstone - EPLP

This website is for individuals with a mass collection of album and vinyls . The application gives the user the ability to catalog and organize the collection. The user has the can Add, Delete and Edit albums. They can also create artists and assign albums to those artists. Once the user has created an album and assigned an artist to it they can also Add and Delete songs to that specific album as well. The application also lets users create playlists or "Mixtapes" with music they already have.

Back-End Capstone - Roads

Website was intended for car enthusiasts and it's a great way for people interested to find their first events. This app lets users post and RSVP to events so users can find events of the type they like. This app also lets users add their car builds to share with other users. Users also have the ability to post parts for other users to buy. After getting feedback from the community I'm currently working on adding some additional features.

Current Project - Kennedy Performance Center Website

-I'm always trying to get better at my craft and I believe the only way is with practice. I'm currently working on an E-Commerce like web application using MVC . I'm interested in learning how to handle transactions and payments through my app.
